

4. State Resource Map

The state resources map provides a way to locate information specific to each state. This section provides fingertip access to the building blocks of SRR, showcasing state and federal programs from around the United States.

How to use the Interactive State Resource Map

To use the state resources map tool, select a state, and information on state-specific SRR or other climate resilience and wildfire resources will appear. These resources are categorized by:

- Laws and regulations (statutes, laws, and regulations)
- Gubernatorial EOs
- Policy and guidance

- Other resources provided by that state
- State case studies

Simply click on the state you are interested in and a screen will pop up to show you which resources are available. Then click on the state name in the pop up and that will bring you available resources. The link to the federal resources are available within the state link.

Federal agency, stakeholder, and academic resources are also presented. These resources, some of which are state-specific, are on topics that can impact site remediation projects or help prevent adverse impacts to these projects. Click [here](#) to view Federal Resources.

There is also a button to select if you are aware of updates to a state's listed SRR resources. Comments about the map are also welcome; use the update button above.
