

Sustainable and Resilient Remediation

Website

This self described tool is a map of projects where remediation of contamination included protections to restore natural resources and habitats, links to various site specific resources are found at the site specific pages linked on the map.

Guidance

This document provides guidance to cleanup project managers so that they 1) understand the risks to cleanup sites associated with a changing climate and 2) increase the resilience of cleanup sites at each phase of the cleanup process. By putting adaptation measures into place during the early stages of a cleanup, the number of feasible cleanup options may increase; their integrity can be maximized; and, in some situations, cost can be reduced.
